## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the electric motor drive and monitoring means, claim 14, the stop surface foamed onto the roof element, claim 23, the stop surface integrated into the edge foaming, claim 24, and at least one parameter from the list of claim 24 (flow chart characteristics must be shown or the feature(s) canceled from the claim(s)). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Objections***

2. Claim 14 is objected to because of the following informalities: “surfaced” line 3 from the end of claim 14 is an error for –surface–. Appropriate correction is required.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
5. Claims 14-20, 22-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schuermann et al.
6. The stop surface is at “1A”. The monitoring means is common knowledge in the art and obvious to use here to meet governmental standards.
7. As to claims 22-24, these structures are of common knowledge in the art and obvious to use here to form the edge of the roof panel in a consistent manner across the edge and effectively seal.

8. As to claim 25, an edge stop length is irrelevant to the ability to engage a thickness.
9. As to claim 26, use of commonly known monitoring systems are obvious to use here to prevent injury.
10. Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Schuermann et al. in view of Omoto et al.
11. It would have been obvious to one of ordinary skill to provide in Schuermann et al. an extended length roof panel with seal engagement inwardly of the edge as taught by Omoto et al. in order to seal more effectively with the edge stop at P2, figure 2.

***Priority***

12. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Germany on 3/29/2004. It is noted, however, that applicant has not filed a certified copy of the German application as required by 35 U.S.C. 119(b).
